# Mack Optimised Service Plans

Maintenance that's made for your Mack.

When it comes to servicing your Mack, one size doesn't fit all. We work to understand the unique needs of your truck and your business to create an optimised service plan that keeps you running at peak performance.

### **Proactive maintenance.**

Instead of just fixing things when they break, the Mack Optimised Service Plan delivers preventative maintenance. By tackling issues before they become a problem, we'll keep you on the road, not stuck at the side of it.

### **Collaborative planning.**

The better we know your business, the better we can support it. That's why we take the time to meet with you and discuss your unique needs.

As part of the planning process, we'll gather historical data on your truck, review specific on-the-job vehicle challenges, evaluate your estimated driving distances and assess your fuel consumption.

Your Optimised Service Plan will outline your truck's specific maintenance needs and scheduling, detailing exactly what and when it requires servicing.

## Planned by us, made for you.

We make sure that our plan fits the way your business operates. If your driving conditions or vehicle's specifications change due to changes in your business, please reach out to your Mack dealer for a new Optimised Service Plan with the updated information. All work undertaken on the truck will be documented to maintain the vehicle's value.

The Mack Optimised Service Plan is the simplest, most efficient way to keep your truck running smoothly, at no additional cost to you.

## How it works.

01.

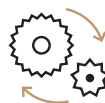

We input your truck's information and exact specifications into our system.

02.

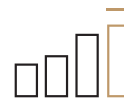

We speak with you about how your truck is used and what sort of distances you expect it to be driven.

03.

We use this information to build a Mack Optimised Service Plan customised to the exact needs of you and your truck.

04.

We design your plan to be flexible, with the ability to fine tune it based on your truck's latest data.
